Dear Mrs. Weems:

Thank you for your interesting and flattering letter of 25th February. On a separate sheet I have listed details of early equipment on hand. The Jan 58 issue of Proc IRE has a long article by me describing activities at Wheaton, Illinois. It lacks pictures. There are numerous references to technical papers. These contain pictures of much of my apparatus.

I've decided to keep my old gear for time being. It has sort of become part of me. I like to look at it once in a while. By todays standards it is very crude. In some ways it seems remarkable it worked at all.

I do think it worthwhile to follow up my discussion in letter to DeVorkin about duplicating Jansky's apparatus. Brelsford is still in active good health. I'm not so sure about Beck. Perhaps it would be appropriate to invite both to Charlottesville for a conference.

Thanks again for your interest. I'll not forget you.

Sincerely yours,

Grote Reber
